

Diplomat® Managed File Transfer Trial Quick Start Instructions (Windows OS)

1. Download the Diplomat MFT Trial installer. Links to the Windows and Linux installers were delivered to you in an email after you submitted your request for a trial.
2. On the system where Diplomat Managed File Transfer is to be installed, create a normal (non-admin) Windows user account that will be used as the logon identity of the Diplomat MFT Trial Service (for example, a regular User account named "DiplomatService").
3. Start the installation on the machine which will run Diplomat MFT.
 - Double-click to launch on the Diplomat MFT installer that you downloaded from Step #1.
 - Select the Diplomat MFT Edition you would like to install: Basic, Standard, or Enterprise.
 - Select **Complete** to install the Diplomat MFT Server onto the system using the default location (C:\Program Files\Coviant Software\Diplomat-trial). Chose **Custom** if you wish to provide a different installation path.
 - A Windows user account is REQUIRED when running Diplomat MFT as a service on Windows. When the installation is finished, run the "Services Control Manager" applet (alternatively, **Start > Run > "services.msc"**), and edit the properties of the "Diplomat Trial 64" service. In the "Logon" tab, specify the Windows User Account that you created in Step #2 as the log on account for the Diplomat MFT Service.
4. Start the Diplomat MFT Trial Service after you have changed the Service Logon account.
5. Open a web browser of your choice (Chrome, Firefox, Edge, or Safari) on the machine running Diplomat MFT and navigate to <https://localhost:8081> to access the Administrator Interface for Diplomat MFT. A shortcut has been placed on your desktop that will open your default browser to this location.

Our installer generates a self-signed certificate at installation time which is unique to your environment, but is not a known certificate to your web browser. As a result, you will get a security warning from your browser; to proceed, choose "Advanced" and "continue to site" to load the administrator interface. Reference this KB article for more details on our generated, self-signed SSL certificate:

<https://knowledgebase.coviantsoftware.com/knowledge-base/diplomat-mft-web-admin-ssl-certificate/>
6. The default credentials for the Administrator Interface are the username "Administrator" and the password "diplomat". You will be prompted to change to a password of your choice at first login. Please remember the password for future reference.
7. Now you are ready to automate your file transfer workflows. Refer to our [Youtube channel](#) for information on setting up your first workflows, and our [Knowledge Base](#) for additional information.

Trial Quick Start Instructions (Linux)

1. Download the Diplomat MFT Trial archive file (.tgz). Links to the Windows and Linux installers were delivered to you in an email after you submitted your request for a trial.
2. On the system where Diplomat Managed File Transfer is to be installed, extract the contents of the Diplomat MFT Trial archive to a folder of your choice. We recommend "/opt/coviant" as a destination.
3. Create a Linux user account on the system which the Diplomat MFT service (daemon) will run as.
4. In the extracted contents, run the installation shell script and follow the prompts. Once installed and started, you can access the Diplomat MFT administration interface via a web browser at port 8081. Refer to the details in the Windows instructions, above, for more information (Steps 5 – 7).
